

RESOLUTE_{ST} ALFALFA

Resolute_{ST} Alfalfa is a fall dormancy 3, persistent, competitive forage yielding alfalfa variety from the Legacy breeding program. Its parental plants were selected for plant vigor, persistence and deep-set crowns in eight-year-old alfalfa stands in Idaho. Resolute_{ST} has a fine stem, dark green herbage color delivering exceptional forage quality. The genetic background of the selected germplasm will deliver saline soil tolerance.

FEATURES

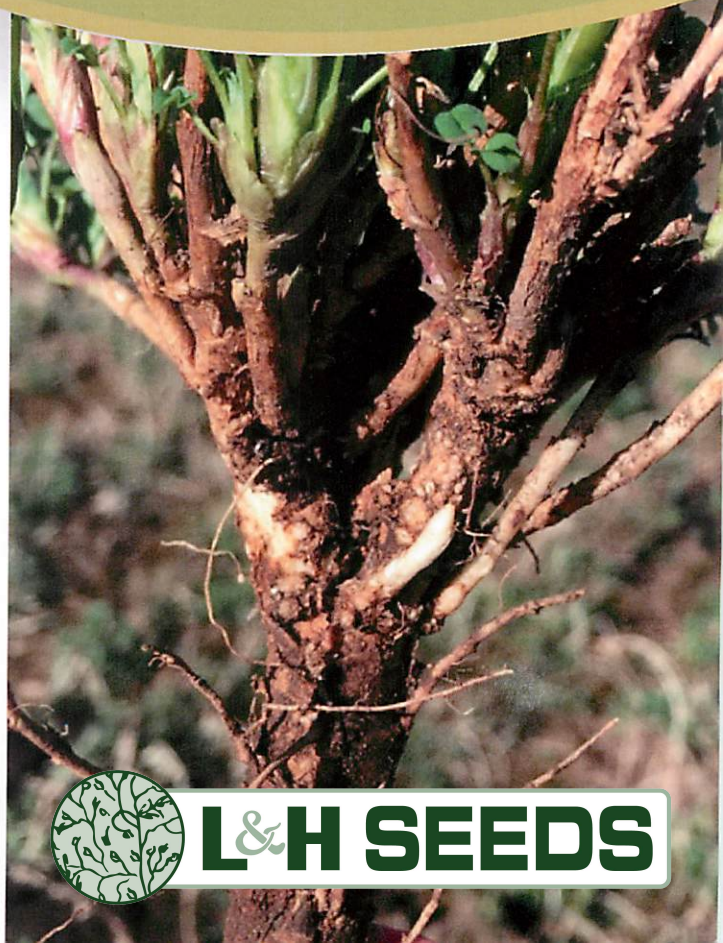

- Fall dormancy 3
- Deep set crowns for traffic tolerance
- Dark green herbage with exceptional forage quality

AGRONOMIC CHARACTERISTICS

Bacterial Wilt	HR
Fusarium Wilt	HR
Anthracoese Race 1	HR
Phytophthora Root Rot	HR
Verticillium Wilt	R
Aphanomyces Root Rot Race 1	MR
Aphanomyces Root Rot Race 2	MR
DRI	30/35
Saline Soils	Tolerant
Fall Dormancy	3.1
WSI Rating	1.6
Recovery after cutting	Delayed/ Ave.
Root	Tap/Some Branch
Crown depth	Sunken
Multi-leaf	Low
Forage Yield Potential	Average
Forage Quality	Very Good

BENEFITS

- Unmatched salt tolerance
- Sunken crown to withstand traffic throughout the year
- Dormant variety for outstanding winter hardiness
- Performs well in highly productive and marginal soils
- May help salt affected soils by improving water infiltration and soil structure
